How does optimising the audio performance for the location of your speaker work?

Joachim Ulbrich - 2021-10-19 - Setup and settings

The placement of your LE speaker in a room can have a big effect on its sound. Selecting speaker position and accessory options during setup in the Braun Audio app ensures that the system's digital signal processing has been optimally configured to match the placement of your speaker in relation to the hard surfaces around it.

You will enjoy highly dynamic, crystal clear, immersive, uniquely Braun sound once placement setup is complete.
